Can afford
Cannot afford
Expected under additivity, $p_{10} + p_{01} - p_{00}$
(a)
Households
Δ = 0.8 pp (−1.1, 2.6)
RERI = 0.17 (−0.25, 0.59)
Standardized prevalence (%)
No adult with chronic illness
Adult with chronic illness
(b)
Adults aged ≥18 years
Δ = 0.2 pp (−1.4, 1.7)
RERI = 0.03 (−0.27, 0.33)
Standardized prevalence (%)
No chronic illness
Chronic illness
(c)
Latent class profiles
1 Daily fruit and vegetables
2 Near-daily fruit and vegetables
3 Weekly (1–3 times) fruit and vegetables
4 Very infrequent fruit, vegetables and meat
Adjusted
+ affordability
Adults in a high-burden household (%)
(d)
Households: adjustment ladder
Minimal
Core (sociodemographic, no need indicator)
Core + need (main)
Fully adjusted
Flexible, fully adjusted
Households: model form
Flexible, core + need
Linear probability model
Households: sensitivity (main model)
Adding ability to make ends meet
Adding deprivation indicators
Log income spline
Without region
NUTS-2 region effects
NUTS-2 pseudo-strata
Outcome: heavy or some burden
Component: medical care
Component: medicine
Excluding no medical expenditure
Modifier: 1 vs 0 chronic adults
Modifier: proportion chronic
Modifier: activity limitation
Modifier: activity limitation, adj. chronic
Chronic illness from age 17
Excluding unknown chronic status
Overlapping fine strata only
Adults: adjustment ladder
Minimal
Core (sociodemographic, no need indicator)
Core + need (main)
Fully adjusted
Flexible, fully adjusted
Additive interaction Δ (pp, 95% CI)
